## SUMMARY

Aspiring Machine Learning & Data Analyst Engineer with robust skills in Python, ML/DL, Data Analytics, and full-stack development. Experienced in building ML pipelines, Power BI dashboards, Flask apps, and end-to-end real-world projects. Strong analytical thinking, problem-solving ability, and hands-on experience gained through internships and multiple personal projects.

## TECHNICAL SKILLS

- **Programming & Tools:** Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, Javascript
- **Machine Learning:** Regression, Classification, Clustering, Ensemble Learning, Model Evaluation
- **Deep Learning:** Neural Networks, CNNs, RNNs, LSTMs, TensorFlow/Keras, Image Classification, Model Optimization
- **Data Engineering:** ETL, Data Cleaning, Data Wrangling, Feature Scaling, DAX, Data Modeling
- **Web Frameworks:** Flask, HTML, CSS, Bootstrap, Jinja2, REST APIs

## WORK EXPERIENCE

### Data Analyst Intern – NullClass

Nov 2024- Feb 2025

- Designed and delivered interactive Power BI dashboards to visualize sales performance and customer insights.
- Used SQL and Excel for data extraction, cleaning, and preprocessing.

### Power BI Data Analyst Intern – Pianalytix

June 2025- July 2025

- Selected for internship opportunity to build client-focused Power BI dashboards and data analysis workflows.
- Worked on sample assignment to demonstrate skills in SQL, DAX, and Power BI for real-world sales datasets.

## PROJECTS

### Esports Player Analyzer & Auction Prediction (Production-ready ML + Flask)- [Github Code](#) , [Live Link](#)

- **Tech Stack –Python, Pandas, NumPy, Scikit-learn, XGBoost, Flask, Matplotlib, HTML/CSS**
- Built a complete system to analyze e-sports player stats using single player search (no CSV upload).
- Predicts player auction value, playstyle profile, and multi-metric breakdown.
- Added 1v1 player comparison, dynamic bar charts, leaderboard, and strategy suggestions.

### MediQUICK (Instant Medicine Delivery Platform) - [Github Code](#)

- **Tech Stack – HTML, CSS, JavaScript, Node.js, Express.js, Google Maps API**
- Built a responsive web application for online medicine ordering with features like cart system, bill calculation, and live delivery tracking using Google Maps API.
- Integrated an AI-powered chatbot for customer assistance.

### US-Based Sales Company Dashboard-[Github Code](#)

- **Tech Stack: Power BI, DAX, SQL, Data Modeling**
- Built a dynamic Power BI dashboard to track KPIs, revenue growth, and product performance with drill-through analysis.
- Applied data modeling techniques for clean and efficient reporting.

### Workmanage App-[Github Code](#)

- **Tech Stack: Flask, SQLite, SQLAlchemy, Jinja2, Flask-WTF, Flask-Login**
- Developed a secure task management app with user authentication, CRUD operations, and SQLite database integration.
- Implemented forms and validation using Flask-WTF and session handling with Flask-Login.

## HACKATHONS

- **Smart India Hackathon:**  
Built a Blockchain based voting system to completely secure voting from vote tampering.

## EDUCATION

Bachelor in Computer Science (AI)  
University of Lucknow

SGPA: 8.58

Nov 2022- June 2026 (Expected)
